

5. Conclusions

Romania's concerns for the implementation of the International Disaster Risk Reduction Strategy, are expressed at the level of the General Inspectorate for Emergency Situations, an organic structure with a national integrating role in the management of all the disasters, which, under the legal prerogatives, was named as a national Framework for Action HFA (Hyogo Framework for Action) and of UN/ISDR Europe. The General Inspectorate organizes and provides the operation of the permanent technical Secretariat of the National Committee for Emergency Situations, as a distinct structure within the National Operations Centre. At national level, the General Inspectorate coordinates the institutions participating in the management of the emergency situations, in accordance with the existing international principles, specific to U.N.O., O.T.A.N., E.U. and to other organic structures in which Romania is a member. The role of the National Committee for Emergency Situations, at present, is that of fulfilling the majority of criteria for the organization and the operation of a national platform, established by U.N.O.-I.S.D.R. through the Hyogo Framework of Action 2005-2015. Taking into consideration all the above aspects, it was necessary to achieve a National Disaster Risk Reduction Platform, as a component of the National Committee for Emergency Situations, operating as a national, multi-sector and inter-discipline system for politics coordination and guiding to reduce the disaster risks, with the participation of the civil and private society, involving all the entities of Romania.

Acknowledgements

We express our thanks to Mrs. Lecturer Loredana – Cristina Dumitriu, EngD, for the valuable guidance and her support, kindly provided to us in working out this article.
